

10 User Stories + Acceptance Criteria + MoSCoW

Sprint 1 · Document Upload Improvement · NedBank Digital

Must have - US-01, 02, 04, 05, 06

Without these the feature fails its primary goal.

Non-negotiable for launch.

Should have - US-03, 07, 08

High value. Include if sprint capacity allows. Target for Sprint 1b or Sprint 2.

Could have - US-09, 10

Valuable but not essential. Include only if time and no regression risk.

Won't have this sprint - Multi-language

Dutch/English only for Sprint 1. Multi-language in Sprint 3.

US-01

MUST

Document guidance before upload

As a new customer, I want to see clear guidance on which documents are accepted - with visual examples - before I start uploading, so that I do not waste time submitting the wrong document

Acceptance Criteria

Given I navigate to the document upload screen

When the screen loads

Then I see a list of all 5 accepted document types, each with a visual thumbnail example, the specific requirements (both sides required, colour only, file formats accepted), and a "Which should I choose?" tooltip that recommends the easiest option based on my country of residence.

US-02

MUST

Real-time photo quality feedback

As a customer taking a photo of my document, I want real-time feedback on image quality before I submit, so that I know my document will be accepted and do not receive a rejection I do not understand.

Acceptance Criteria

Given I am in the camera capture

When the image is blurry, too dark, too small, or has glare

Then an inline warning appears with a specific, actionable message ("Move to a brighter area" / "Hold the camera steady" / "Move closer to the document") before I can tap Submit, and the Submit button remains disabled until quality passes a minimum threshold

US-03

SHOULD

Mobile camera and photo library support

As a customer using a mobile device, I want to choose between taking a live photo or uploading from my photo library, so that I can complete the process in whatever way suits my situation.

Acceptance Criteria

Given I am on the document capture screen

When the screen loads on a mobile device

Then I see two clearly labelled options: "Take a photo now" and "Upload from my library", and both options apply the same quality validation checks before allowing submission

US-04

MUST

Upload progress indicator

As a customer who has submitted a document, I want to see a visible progress indicator during processing, so that I know the system is working and have not lost my progress.

Acceptance Criteria

Given I have tapped Submit on the document upload screen

When the system is processing my file

Then a progress bar is visible within 500ms of submission, the Submit button becomes disabled to prevent double submission, and if processing takes more than 10 seconds, I see the message "Still processing - this can take up to 30 seconds"

US-05

MUST

Specific rejection reasons with guided retry

As a customer whose document was rejected, I want to receive a specific reason for the rejection with clear instructions on how to resubmit, so that I can resolve the issue without contacting customer service.

Acceptance Criteria

Given my uploaded document fails automated validation

When the rejection screen is displayed

Then I see the specific rejection reason from a predefined list (file too large / blurry image / wrong document type / expired document / missing back side), accompanied by a visual example of a correctly submitted document, and a "Try again" button that pre-fills my previously selected document type so I do not start from scratch

US-06

MUST

Pre-validation before manual review queue

As a Compliance Officer, I want all submitted documents to be automatically validated for format, size, and completeness before entering the manual review queue, so that my team only spends time on valid, reviewable submissions.

Acceptance Criteria

Given a customer submits a document

When the file is received by the system

Then the system automatically validates: file format (JPEG, PNG, PDF only), file size (max 10MB), minimum resolution (300 DPI), and presence of both sides where required - and only documents passing all four checks enter the compliance review queue. Failed documents are returned to the customer immediately with the specific failure reason

US-07

SHOULD

Upload history visible in CRM

As a Customer Service agent, I want to see a customer's upload attempt history, current status, and any failure reasons in the CRM, so that I can resolve upload issues without asking the customer to repeat information they have already provided.

Acceptance Criteria

Given I open a customer's profile in the CRM

When the customer has made at least one upload attempt

Then I see a chronological log showing: date/time of each attempt, document type selected, validation result (passed/failed), failure reason if applicable, and current review status - updated in real time

US-08

SHOULD

Real-time status notifications

As a customer awaiting document review, I want to receive in-app status notifications at each stage of the review process, so that I am not left wondering if my submission was received or what is happening.

Acceptance Criteria

Given my document has passed automated validation and entered the review queue

When my document status changes

Then I receive an in-app push notification within 5 minutes of the status change, with a plain-English message at each of three stages: "Received — under review within 24 hours" / "Approved — your account is now fully active" / "We need more information — [specific reason with retry link]"

US-09

COULD

Upload analytics tracking

As a Product Manager, I want upload completion rates tracked by step, device type, and document type, so that I can identify drop-off points and prioritise further improvements with data.

Acceptance Criteria

Given a customer starts the upload journey

When they interact with any step

Then each of the 8 journey steps fires a named analytics event to the data platform, capturing: step name, timestamp, device type (iOS/Android/web), document type selected, and outcome (proceeded/abandoned/errored) — enabling a funnel report by step, device, and document type

US-10

COULD

Resume interrupted upload

As a customer with a slow internet connection, I want to resume an interrupted upload from where I left off rather than restarting entirely, so that a poor connection does not prevent me from completing verification.

Acceptance Criteria

Given my upload is interrupted due to connection loss after I have already selected and captured my document

When I reopen the app and navigate to the upload section

Then I see the message "You have a document ready to submit - continue from where you left off?" with a "Continue" button that resumes the upload using the cached file, without requiring me to re-photograph the document
